

Elmwood IL grower, Errol Brewer Grows 100 Bushel Beans with MRK Cyst Tech® Seed

Errol reports “This is my third year of planting beans on beans using Mark Seed’s Cyst Tech® brand of beans. My yield topped out at 102 bushels an acre in a field partially drowned out with a combined average yield of 85.8 bushels an acre. On another field I averaged 65.7 bushels per acre planting both the RR0638CTA and the RR0637CTA.”

Errol continued, “my farm is mine reclamation ground so additional fertilizer was necessary. I applied a mix of ½ gal of ENC and ½ gal of 10-20-10 per acre at flowering and at the end of July. I also used the insecticide ASANA® XL on July 5th.”

“The yields and the Mark Seed have earned my continued support. Cyst Tech® has a loyal customer with me.”
